

Week 3 Progress | 1/25 - 1/31

Rhys Williams

1. What were your goals for this week? PASTE them into your blog post.

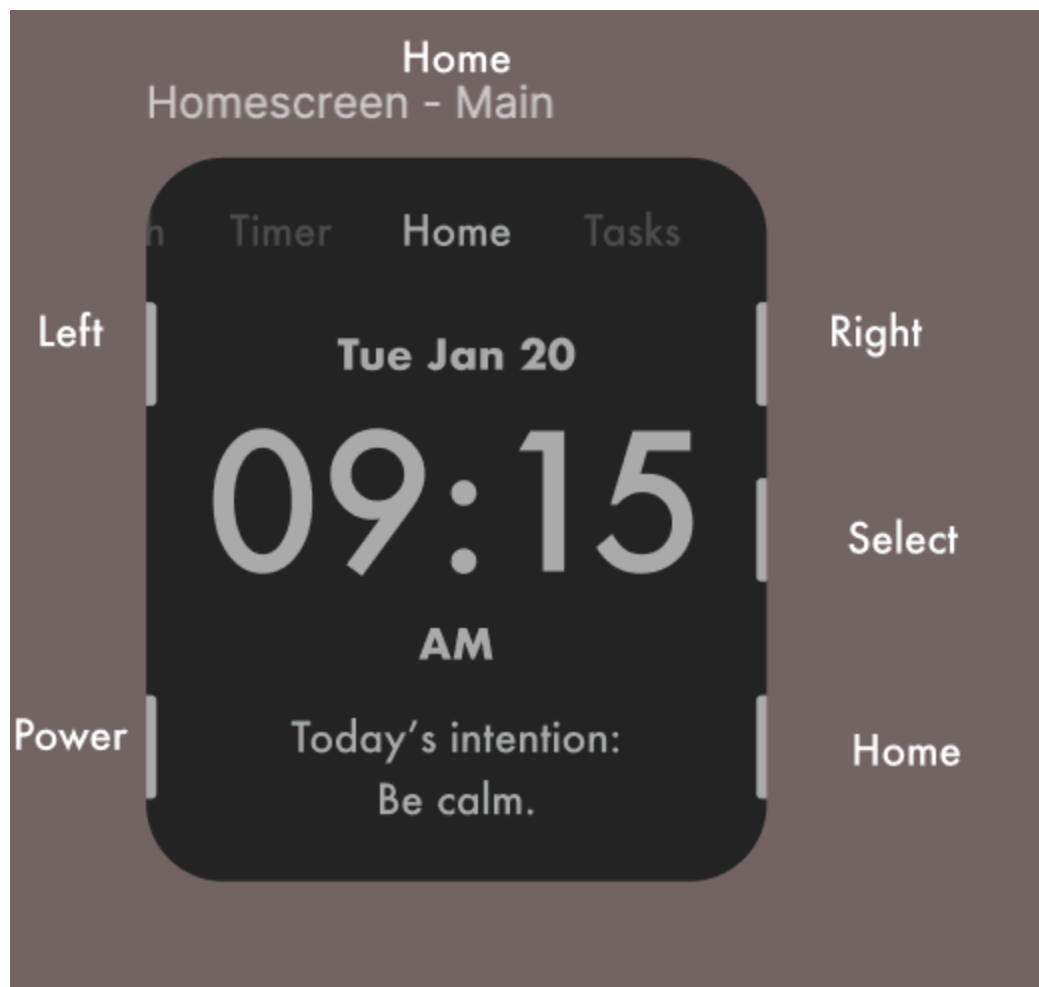

Goals for this week:

- Have a fully interactive interface prototype
- Clean up the interface
- Interview humans to test the prototype

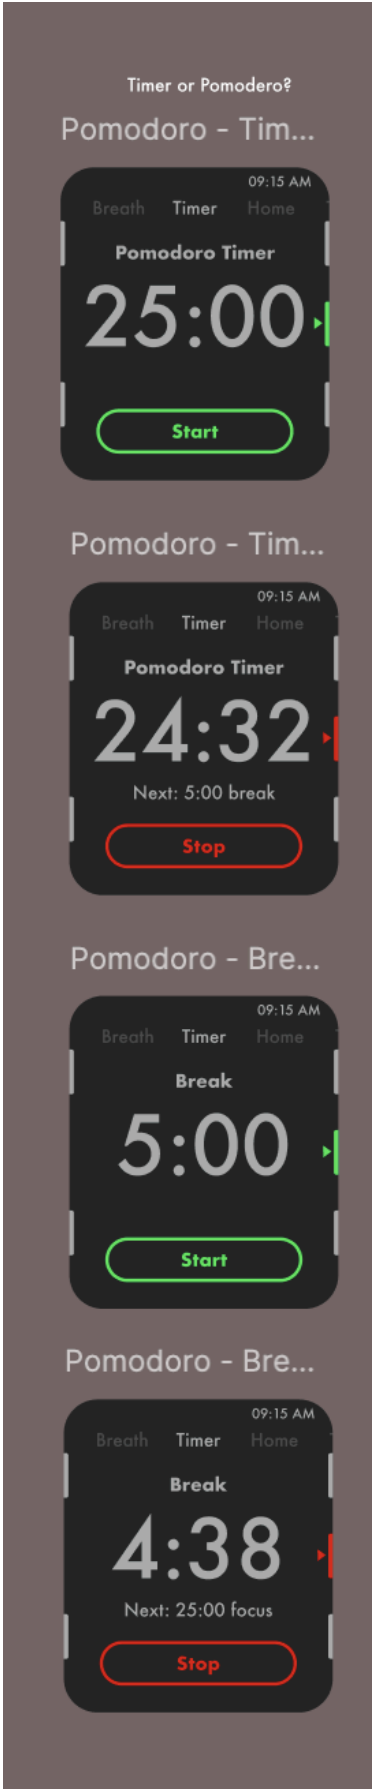

Cleaning up the interface is the first step.

Liz and I discussed a new interface for the watch, adding the “user’s daily intention” at the bottom and a navigation bar at the top, to let the user know where they are.

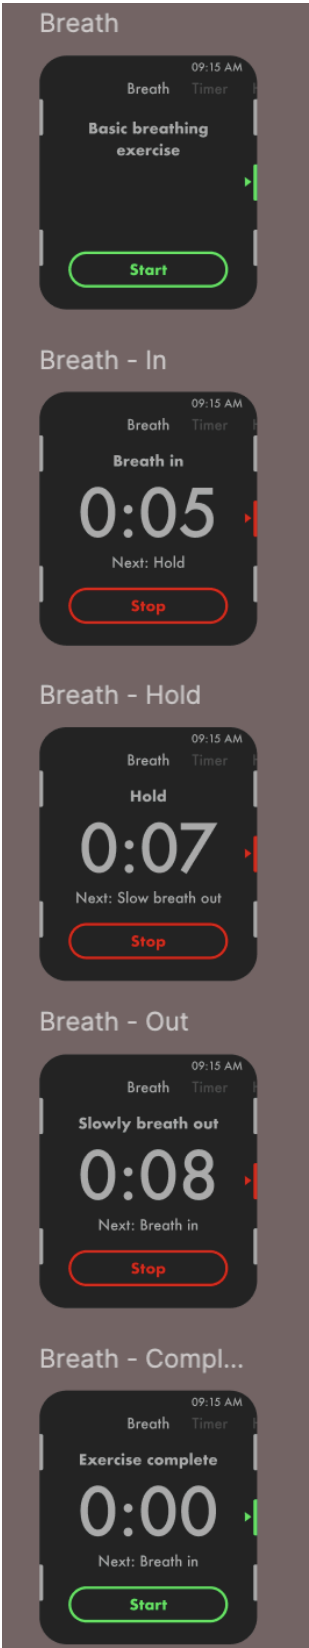

Also changed the navigation from vertical to horizontal

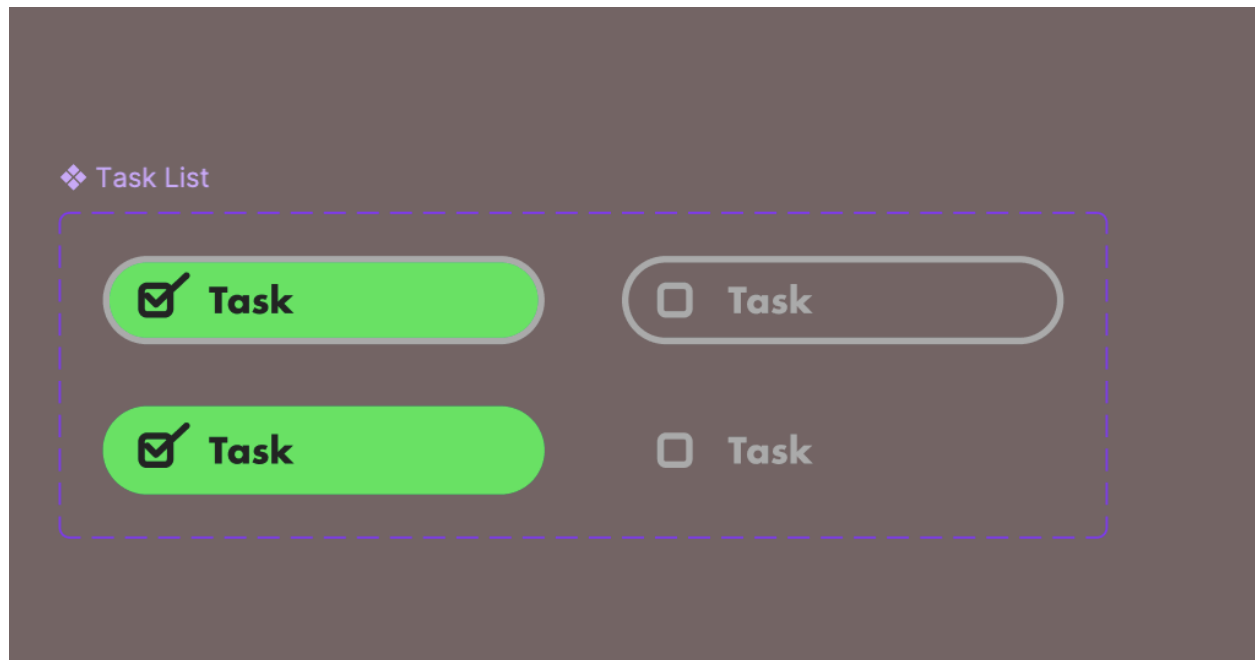

Clean up the Pomodoro timer

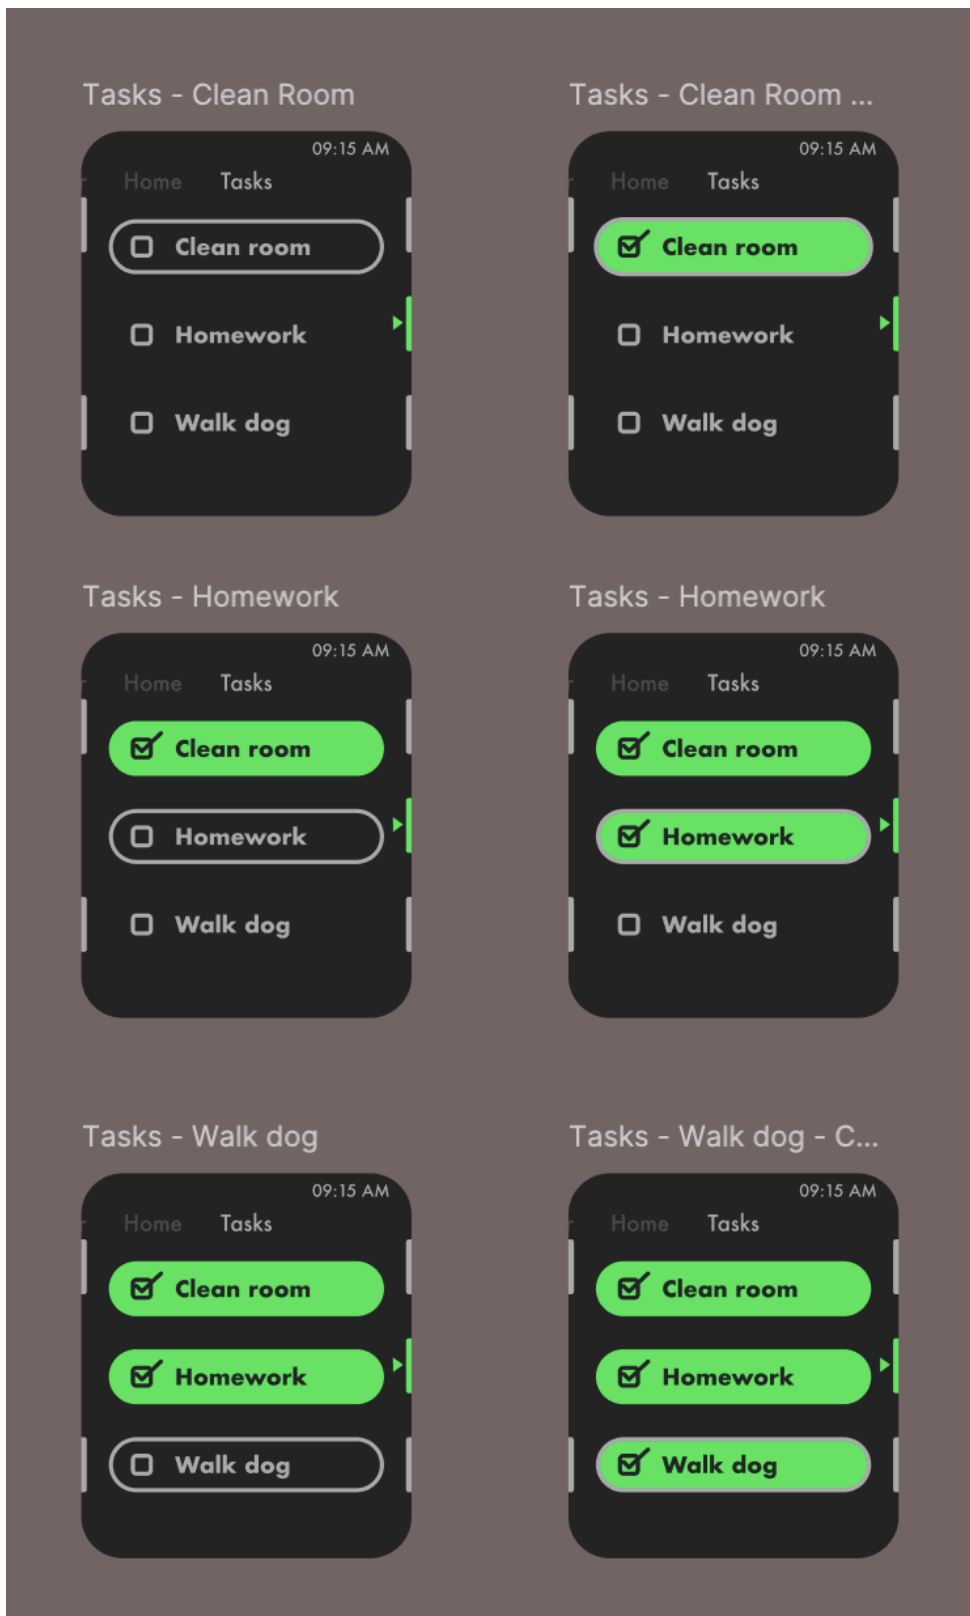

Clean up the basic breathing exercise function

Task list components

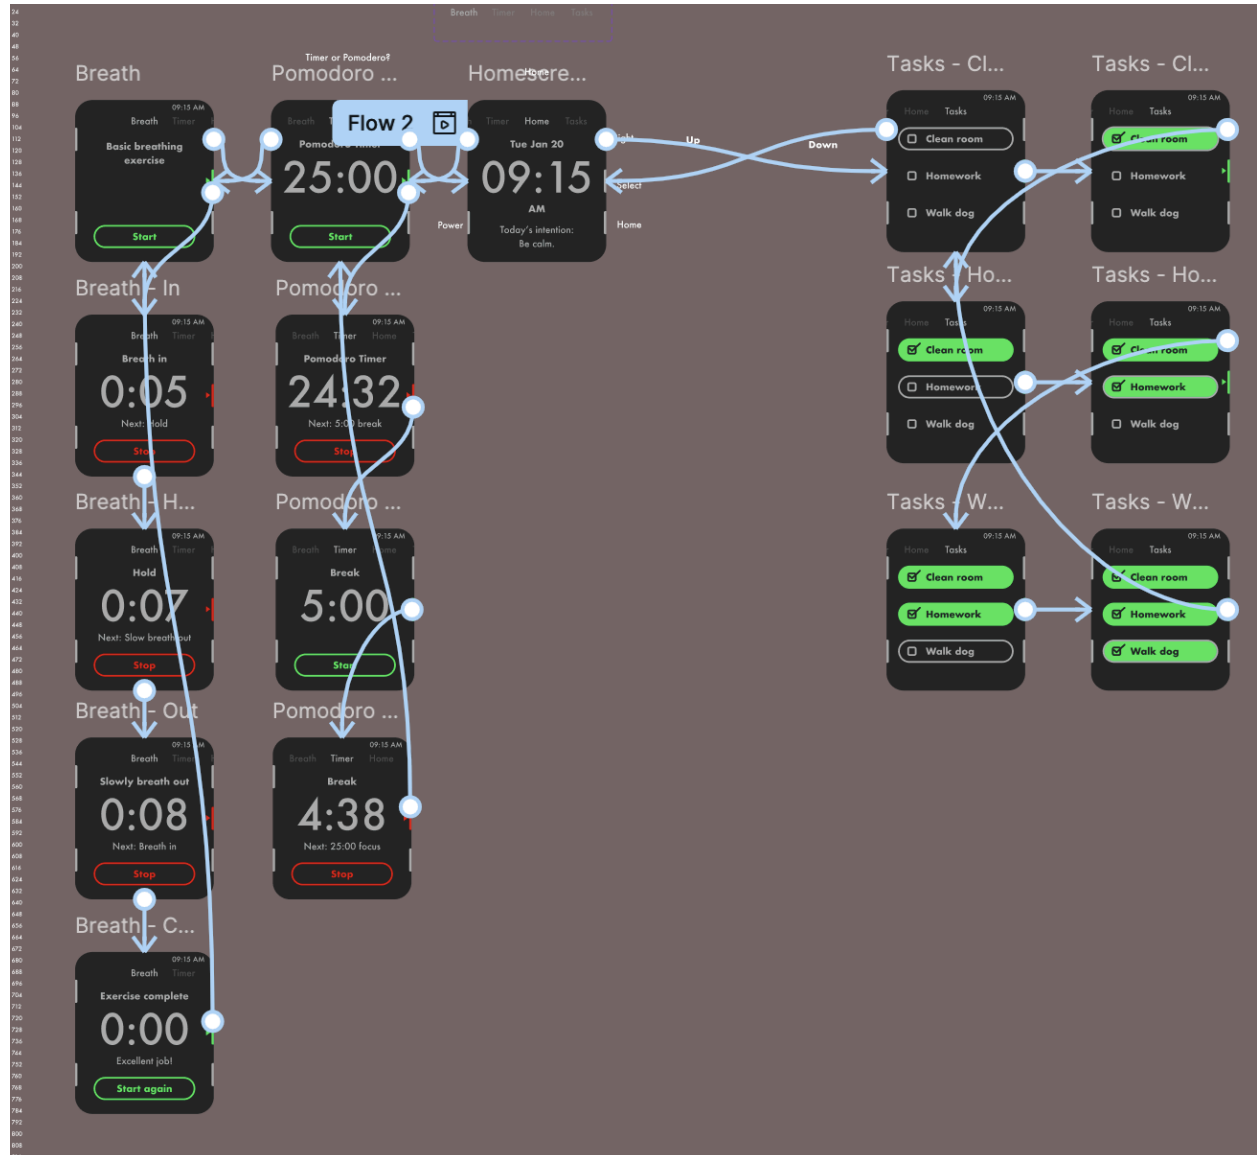

Interaction of a simple list being checked off top to bottom, one at a time.

Completed user flow of every watch feature

I will use this prototype to interview people to discover what about the navigation and layout works and what does not.

HX Testing - Person 1

Part 1

- List your starting deliverables and UX Testing Type you plan to use with each type of stakeholder
 - Include the full set of interview questions, script, etc. - i.e. whatever materials are needed to conduct your test(s).

Starting deliverable: UI [Figma Mockup](#)

UX Testing Type: Usability test on Figma prototype

Research Questions:

- How do users learn buttons on a watch?
- How should we map the buttons to content on the watch?
- How should information be layed out on the watch face?
- What colors fit a smart watch that don't feel overwhelming?
- How users feel after interacting with task menu
- Are the features on the watch simple enough to learn intuitively?
- Is there anything overly complex on the watch?
- What kind of buttons do we want to have? Left right? Up and down? Select?
- Can usrsers connect colors?

Script:

Introduction

- Hello. Thank you for your time. In this test, we'll be asking you for your feedback on a watch interface design. What you'll see today is a prototype, so functionality will be limited. I will be asking questions and giving you a task to complete today. Please remember this is not an assessment of you, but the website itself. I will be taking notes for reference later on.
- First, we will introduce our product: [Description of watch features to new user from [User Manual](#)]
- For testing purposes, we went ahead and selected an intention and 3 tasks
 - Your intention for the day is: Be **Calm**
 - Your tasks for the day:
 - Clean room
 - Homework
 - Walk dog

Task 1: Tasks

- This is the watch home screen. Say you wanted to view your tasks. How would you navigate to find it?
- Middle button on the right
- Up and down arrows to go in between task or repeat click on middle
- On a scale of 1 to 5 [1 being very easy and 5 being very difficult] how easy was it for you to find your tasks?

2

- Was there anything confusing?
- Task screen
 - Top left button goes up
 - Bottom left button goes down
 - Middle right select
 - Top right go forward
 - Bottom right go forward
 - Saw an audio thing, assume mute
- Thank you, please navigate back to the home screen.

Task 2: Pomodoro Timer

- This is the watch home screen. Say you wanted to use a pomodoro timer. How would you navigate to find it?

Top left

Top left take to timer

- On a scale of 1 to 5 [1 being very easy and 5 being very difficult] how easy was it for you to find the Pomodoro timer?

1

- Was there anything confusing?

no

- Thank you. Please navigate back to the home screen.

Task 3: Breathing exercise

- This is the watch home screen. Say you wanted to use a breathing exercise. How would you navigate to find it?

Top left

- On a scale of 1 to 5 [1 being very easy and 5 being very difficult] how easy was it for you to find a breathing exercise?

1

- Was there anything confusing?

Curious as to what the two bottom buttons do

Make the timer move

- Thank you. Please navigate back to the home screen.

General questions

- How do you feel about the color scheme?

Like the minimalistic design, not knowing what the bottom two buttons do, like the grey and green, red is a little much

- Futura
- Like the left to right navigation

- How do you feel about the navigation?
- Is there anything missing?
- Function on samsung watch, tested cortisol, stress indicator, take a second to breath
-
- How easy would it be to put new tasks on the watch
- Liked the intention
 - If today's intention is assumed, then the text title is not needed
- "Is home necessary with only 4 options?"

Hide buttons first, see what users use to navigate, select, power

- **App on phone on the go, sync up to watch would be helpful**
- **If you don't care about breathing, be able to remove that**
- **Any specific quote on the bottom of the screen, would be able to choose**
- **Make sure the charger is compatible, want some security knowing you can charge it on the go**
- **Button layout**
- **Pomodoro timer, liked having start and stop being the same button**
- **Little buzz when button pressing**
- **Imagine myself having more than three tasks**

- **Always have more than three tasks, always**
- **Expanding text to next row to fit onto screen, adjusting box size instead of text size**

The page above is a list of questions I will gather from each user I interview.

HX Testing - Person 2

Part 1

- List your starting deliverables and UX Testing Type you plan to use with each type of stakeholder
 - Include the full set of interview questions, script, etc. - i.e. whatever materials are needed to conduct your test(s).

Starting deliverable: UI [Figma Mockup](#)

UX Testing Type: Usability test on Figma prototype

Research Questions:

- How do users learn buttons on a watch?
- How should we map the buttons to content on the watch?
- How should information be layed out on the watch face?
- What colors fit a smart watch that don't feel overwhelming?
- How users feel after interacting with task menu
- Are the features on the watch simple enough to learn intuitively?
- Is there anything overly complex on the watch?
- What kind of buttons do we want to have? Left right? Up and down? Select?
- Can usrrers connect colors?

Introduction

- Hello. Thank you for your time. In this test, we'll be asking you for your feedback on a watch interface design. What you'll see today is a prototype, so functionality will be limited. I will be asking questions and giving you a task to complete today. Please remember this is not an assessment of you, but the website itself. I will be taking notes for reference later on.
- First, we will introduce our product: [Description of watch features to new user from [User Manual](#)]
- For testing purposes, we went ahead and selected an intention and 3 tasks
 - Your intention for the day is: Be **Calm**
 - Your tasks for the day:
 - Clean room
 - Homework
 - Walk dog

Taks 1: Tasks

- This is the watch home screen. Say you wanted to view your tasks. How would you navigate to find it?

Top right button

“Reminds me of king soopers gas station”

- On a scale of 1 to 5 [1 being very easy and 5 being very difficult] how easy was it for you to find your tasks?

1

- Was there anything confusing?

First instinct is that its a touch screen, but after knowing there are physical buttons,easy

- Task screen

Would press down right button to navigate down on the tasks

How would you check off a task?

- Not clear at the moment
 - One of the top left or bottom left button
 - First instinct is bottom button for down

- Thank you, please navigate back to the home screen.

Taks 2: Pomodoro Timer

- This is the watch home screen. Say you wanted to use a pomodoro timer. How would you navigate to find it?

- On a scale of 1 to 5 [1 being very easy and 5 being very difficult] how easy was it for you to find the Pomodoro timer?

1

- Was there anything confusing?

No

Navigating through each screen was easy

- Thank you. Please navigate back to the home screen.

Selected correct button for selection, start timer

Taks 3: Breathing exercise

- This is the watch home screen. Say you wanted to use a breathing exercise. How would you navigate to find it?

1

- On a scale of 1 to 5 [1 being very easy and 5 being very difficult] how easy was it for you to find a breathing exercise?

1

- Was there anything confusing?

No

Make the timer move

- Thank you. Please navigate back to the home screen.

General questions

- How do you feel about the color scheme?

“Is there a way to customize the watch layout?”

Customize the watch through the dock

- How do you feel about the navigation?
- Is there anything missing?

No idea what bottom button does

Home button maybe not needed, confused with going up right on the task screen

“Are there different breathing exercises to choose from”

Have customizable background, color scheme, fonts

HX Testing - Person 3

Part 1

- List your starting deliverables and UX Testing Type you plan to use with each type of stakeholder
 - Include the full set of interview questions, script, etc. - i.e. whatever materials are needed to conduct your test(s).

Starting deliverable: UI [Figma Mockup](#)

UX Testing Type: Usability test on Figma prototype

Research Questions:

- How do users learn buttons on a watch?
- How should we map the buttons to content on the watch?
- How should information be layed out on the watch face?
- What colors fit a smart watch that don't feel overwhelming?
- How users feel after interacting with task menu

Script:

Introduction

- Hello. Thank you for your time. In this test, we'll be asking you for your feedback on a watch interface design. What you'll see today is a prototype, so functionality will be limited. I will be asking questions and giving you a task to complete today. Please remember this is not an assessment of you, but the watch itself. I will be taking notes for reference later on.
- First, we will introduce our product: [Description of watch features to new user from [User Manual](#)]
- For testing purposes, we went ahead and selected an intention and 3 tasks
 - Your intention for the day is: **Be Calm**
 - Your tasks for the day:
 - Clean room
 - Homework
 - Walk dog

Task 1: Tasks

- This is the watch home screen. Say you wanted to view your tasks. How would you navigate to find it?

Bottom right

Guessed the buttons on left side were brightness, volume

Assumed features would be in own direction,

- On a scale of 1 to 5 [1 being very easy and 5 being very difficult] how easy was it for you to find your tasks?

2

- Was there anything confusing?

No

- Task screen
- What button do you think you should check to check off the task?

Initially the square

Top right

- What button do you think navigates down on the list?

Bottom right

Does not make sense to have top button go down

- Thank you, please navigate back to the home screen.
- Other thoughts
 - Scroll wheel would be helpful
 - A lot of buttons

Task 2: Pomodoro Timer

- This is the watch home screen. Say you wanted to use a pomodoro timer. How would you navigate to find it?

Top left

- On a scale of 1 to 5 [1 being very easy and 5 being very difficult] how easy was it for you to find the Pomodoro timer?

1

- Was there anything confusing?

I don't know what bottom left button does

- Thank you. Please navigate back to the home screen.

Select the correct button for selection, start timer

- How do you think you would start the timer?

Top right button

Pomodoro Timer screen makes more sense to have middle right be selection button

Task 3: Breathing exercise

- This is the watch home screen. Say you wanted to use a breathing exercise. How would you navigate to find it?

Top left button

Starting to like navigation of left and right button

"Going back to

Have selection button physically look different

- On a scale of 1 to 5 [1 being very easy and 5 being very difficult] how easy was it for you to find a breathing exercise?

1

- Was there anything confusing?

Nothing

- Thank you. Please navigate back to the home screen.

General questions

Like where the buttons are at the end

Initial confusion of starting out the buttons is only problem

- How do you feel about the color scheme?

Bland in a good way

Not stressful

How do you feel about the navigation?

- Is there anything missing?

Simplistic settings menu, be able to change brightness, and be able to change color scheme

Change between military time and standard time

Accessibility settings for colorblind people

Most used button, or most important, should have different shape

Results

After conducting these interviews, I organized every question into a sheet and wrote another column to gather what the average user was thinking or suggesting about the navigation or overall aesthetic of the watch.

The results can be found in this document: [HX Testing Feedback](#)

The biggest takeaway I got from user suggestions and their questions was wanting customizable features that give the user freedom to change the theme and color scheme. We will use this feedback by creating a customizable theme, with a simplistic settings feature, and a personalized navigation menu. Next time I conduct interviews or gather data, I will notice it's easier to come up with relevant questions while conducting, rather than thinking of them beforehand. I will try to pretend I am interviewing someone before actually interviewing. I also noticed that giving the human permission to say whatever they want allows them to give great insights into what we have and what we should improve on.

2. What did you accomplish, please reflect on your time management. What worked or didn't?

I completed the first interactive prototype of the watch and conducted three human experience tests aimed at people I know with ADHD or a type of neurodivergency. The feedback I gathered was very helpful and will give us insight into what details we will add to the physical watch.

3. How did you integrate feedback?

I integrated feedback by discussing my findings with the group and seeing what about our interface we will keep, add, or change.

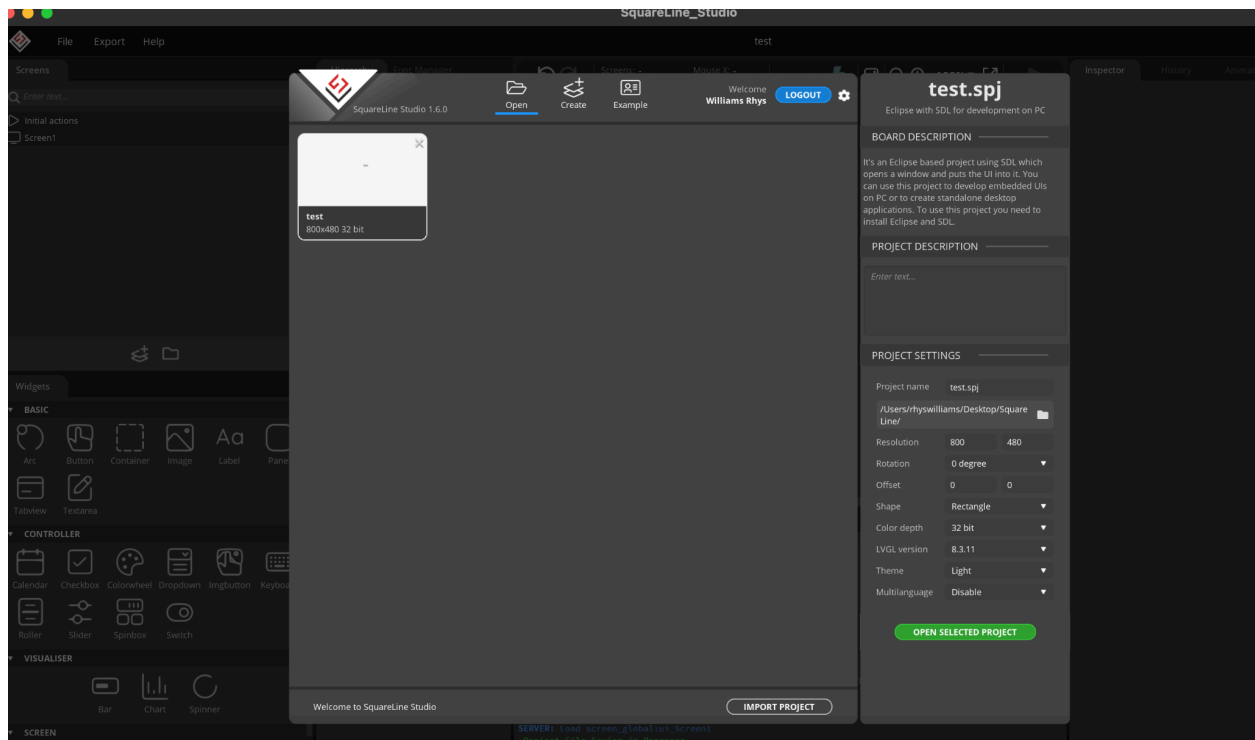

4. What was unexpected / what lessons did you learn?

I personally learned that I work better in longer increments, as it takes my brain several minutes to really focus on what I am doing. Regarding the results of what I did this week, I spent an hour or two really testing out the functions in Figma to make the prototype really interactable and give the human some freedom. Although I realized it was a little above my skill level and went for a simpler flow, I will circle back to that as I get more accustomed to the software.

Week 4 Progress | 2/1 - 2/7

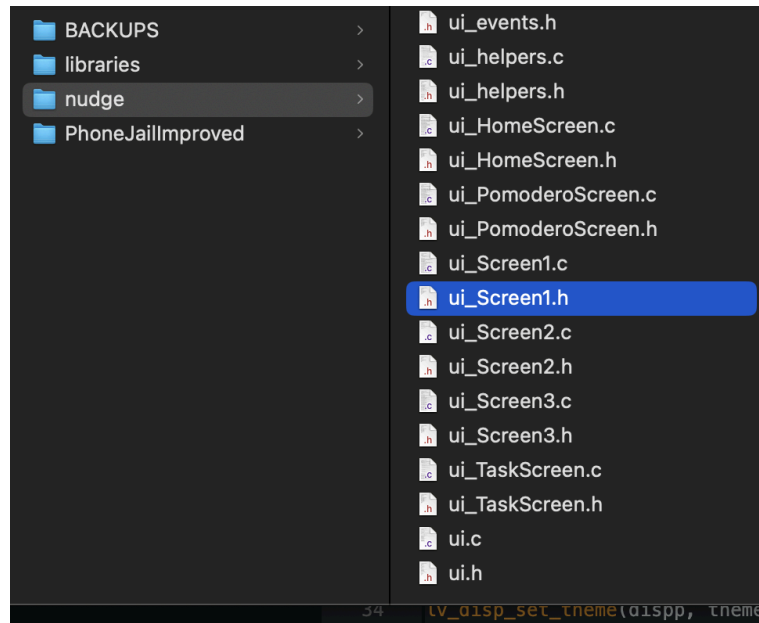

Learning SquareLine Studio, spent time looking up tutorials and learning the software

- Update UI designs from HX tests
- Learn how to put Figma designs into Squareline
- Presentation
- Complete UI for charging dock
- Edit naming conventions on Figma file

Unfortunately, my files stopped working and could not open correctly. I spent many hours attempting to fix this issue.

Was able to successfully receive SquareLine Studio file from Liz and edit it. Was also able to successfully export it into Arduino.

Total files attempting to compile

```
lv_conf.h x
Users > rhyswilliams > Documents > Arduino > nudge > libraries > C lv_conf.h > LV_FONT_MONTERRA
355 extend the default
356 #define LV_USE_LARGE fonts Aa ab_* 1 of 8
357
358 =====
359 FONT USAGE
360 =====*/
361
362 Montserrat fonts with ASCII range and some symbols using bpp = 4
363 https://fonts.google.com/specimen/Montserrat*/
364 #define LV_FONT_MONTERRAT_8 0
365 #define LV_FONT_MONTERRAT_10 0

377 #define LV_FONT_MONTERRAT_34 0
378 #define LV_FONT_MONTERRAT_36 0
379 #define LV_FONT_MONTERRAT_38 0
380 #define LV_FONT_MONTERRAT_40 0
381 #define LV_FONT_MONTERRAT_42 0
382 #define LV_FONT_MONTERRAT_44 0
383 #define LV_FONT_MONTERRAT_46 0
384 #define LV_FONT_MONTERRAT_48 0
385
386 demonstrate special features*/
387 #define LV_FONT_MONTERRAT_12_SUBPX 0
388 #define LV_FONT_MONTERRAT_28_COMPRESSED 0 /*bpp = 3*/
389 #define LV_FONT_DEJAVU_16_PERSIAN_HEBREW 0 /*Hebrew, Arabic, Persian letters a
390 #define LV_FONT_SIMSUN_16_CJK 0 /*1000 most common CJK radicals*/
391
392 pixel perfect monospace fonts*/
```

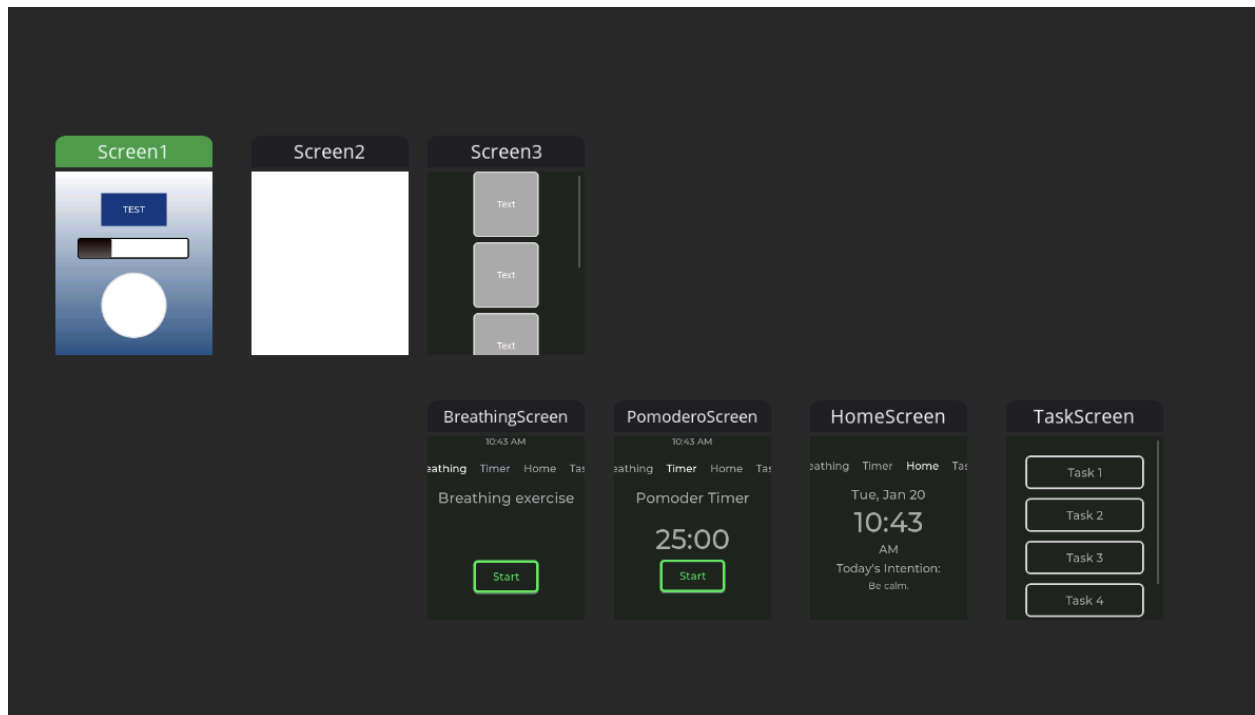

Compilation error that occurred was that the fonts were not loading correctly, or they were not activated. I went into the lv_conf.h file and set the 0s to 1s to activate them. Activating the files worked and the arduino compiled successfully

Test to see if I can receive a file through email, upload it to squareline, edit the file, export it to arduino, compile, and upload it to the ESP32S3

The was the first screen on the file, so this test was successful.

Current squareline file:

Squareline is much different than Figma.

In order to find the button configurations, I need to find the GPIO in my files.

1. What were your goals for this week? PASTE them into your blog post.

Update UI designs from HX tests
Learn how to put Figma designs into Squareline
Presentation
Complete UI for charging dock
Edit naming conventions on Figma file

2. What did you accomplish, please reflect on your time management. What worked or didn't?

I spent time learning the foundations of SquareLine and transferring the interfaces from that software into our ESP32S3 watch using Arduino. I now have a much better understanding of this software and how to compile each iteration. My time management was overall organized, but I will give myself more time to use this software, as many roadblocks occurred, which took longer than expected.

3. How did you integrate feedback?

I integrated the feedback I received from the week prior by making little changes to the Figma designs that made the user flow simpler. I also spent a lot of time learning how to use SquareLine studio, specifically being able to share files with my teammates, and configure the saves to the Arduino file.

4. What was unexpected / what lessons did you learn?

I learned that SquareLine Studio is much different than Figma, and that the feature to automatically transfer interfaces does not exist on Studio, but on SquareLine Vision. I also spent time trying to integrate Vision, but the setup was too different to start over. I realized the best way for me to learn this application is part trial and error, and tutorials, but I will work with the backend group to navigate through each screen.

Week 5 Progress | 2/8 - 2/13

1. What were your goals for this week? PASTE them into your blog post.

- a. Finish Watch UI for Squareline Thursday 2-5PM
- b. UI for docking station (Figma + Squareline) Friday (11AM-1:30PM)
- c. Mentor meeting TBD
- d. UI for docking station (Figma + Squareline) Sunday (11AM-2PM)

2. What did you accomplish, please reflect on your time management. What worked or didn't?

What worked for me this week was setting aside time to work solely on this project instead of focusing on multiple assignments at once.

3. How did you integrate feedback?

I integrated feedback by finding other color schemes for the watch that may fit the user better than the original. I also created a layout on Figma to integrate into Squareline Studio.

4. What was unexpected / what lessons did you learn?

I learned that since Squareline Studio does not allow two people to work on the same project at the same time, it is really important to have communication and mini deadlines between teammates.

Completing UI for the docking station of our project

Start up screen, when opening Nudge for the first time

Homepage V2

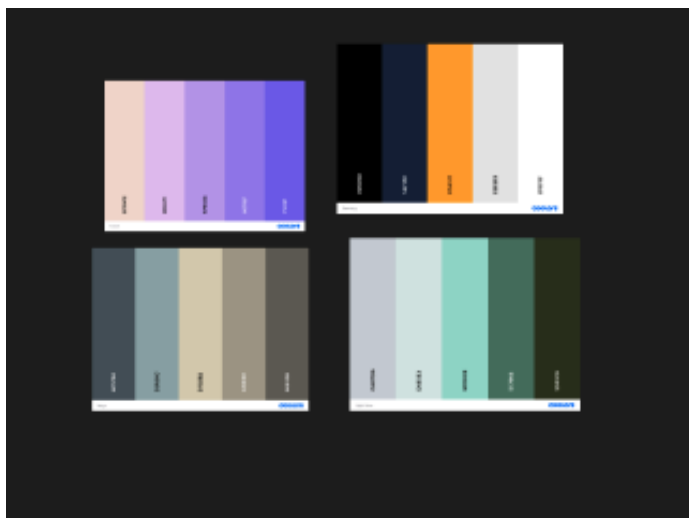

Version 2 of the home page, reduces font sizes, and adjusted button sizes

Our group meets up every Monday night to discuss our progress, here are some things I will add from the meeting:

- Will add an icon that represents transferring the information to the watch
- A summary page that the user can see everything they will transfer to the watch
- Ideas for different fonts (Futura was criticized for looking too “corporate”)
- Start this process in SquareLine Studio itself, as you are not able to transfer Figma files into Studio, so use Figma as the outline and reference

Potential color schemes:

Week 6 Progress | 2/15 - 2/21

Rhys

- Help with watch interface functionality

Specifics:

Naming conventions in Squareline:

screenButtonType

LB -> label

BTN -> button

CNT -> container

Side buttons:

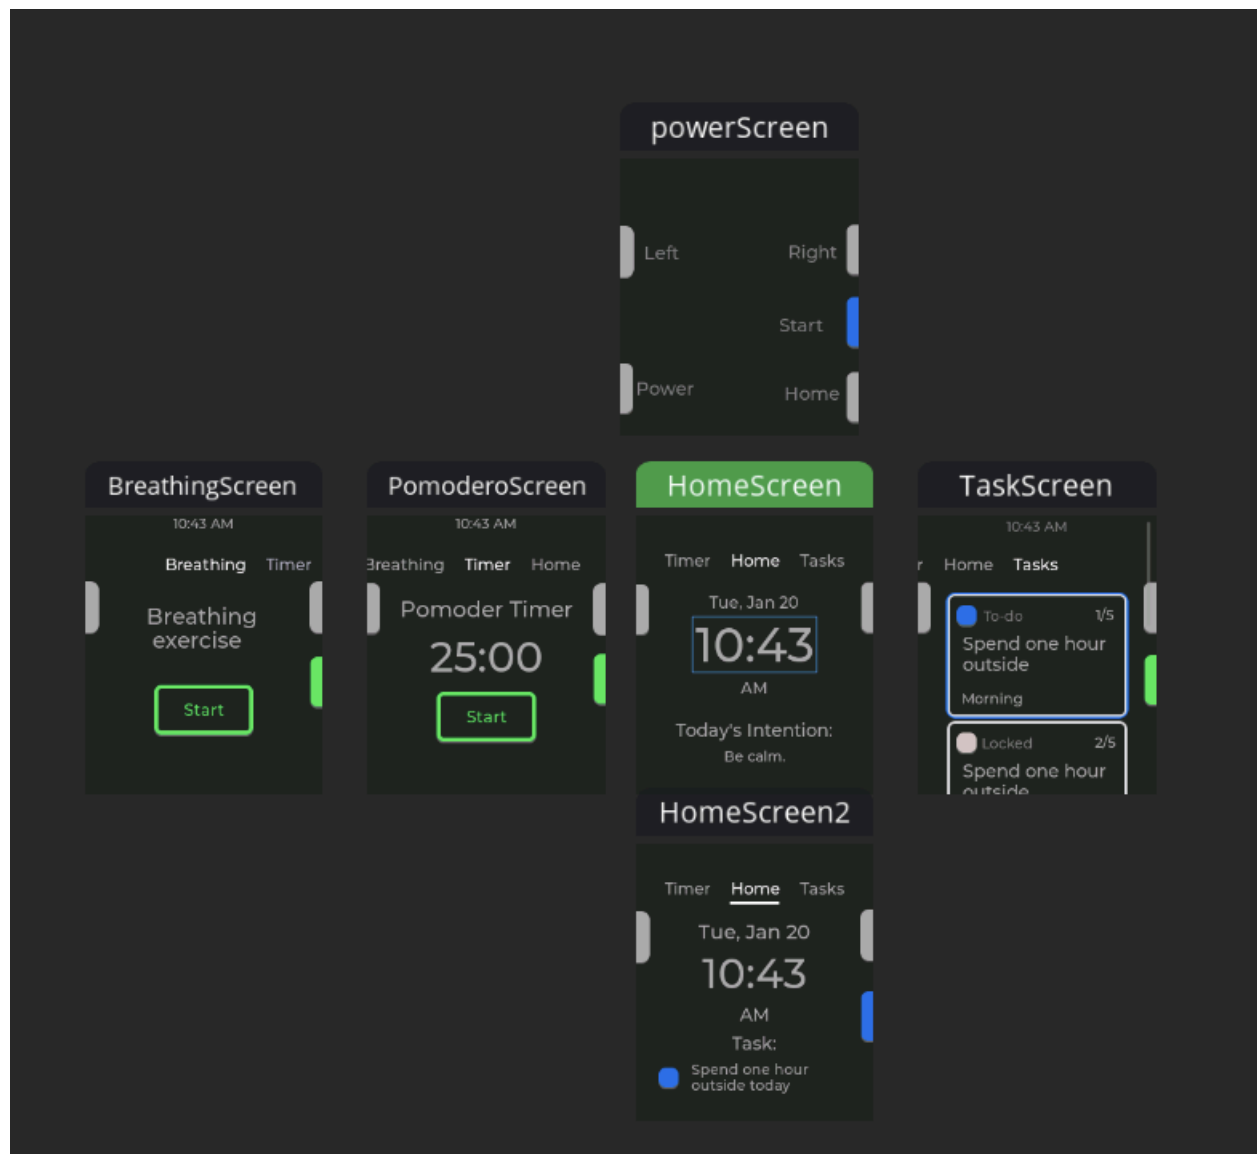

screenNameDirectionButton

EX:

breathLeftBTN

AVOID IMAGES

- ☒ Redesign homepage
 - ☒ Middle watch number bigger
 - ☒ Dedicated space for intention and notification
 - ☒ Centering navigation menu for each page
 - ☒ Highlighting task bar
 - ☒ Figure out if icons work

Cleaning up the UI

outside

HomeScreen

Timer Home Tasks

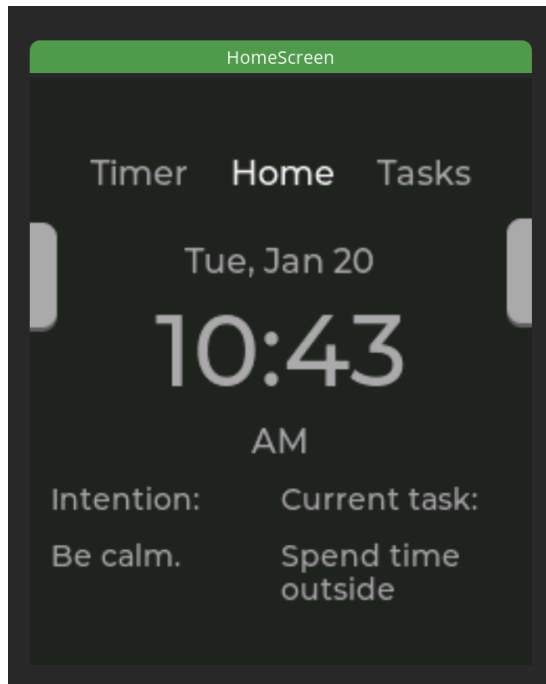

Tue, Jan 20

10:43

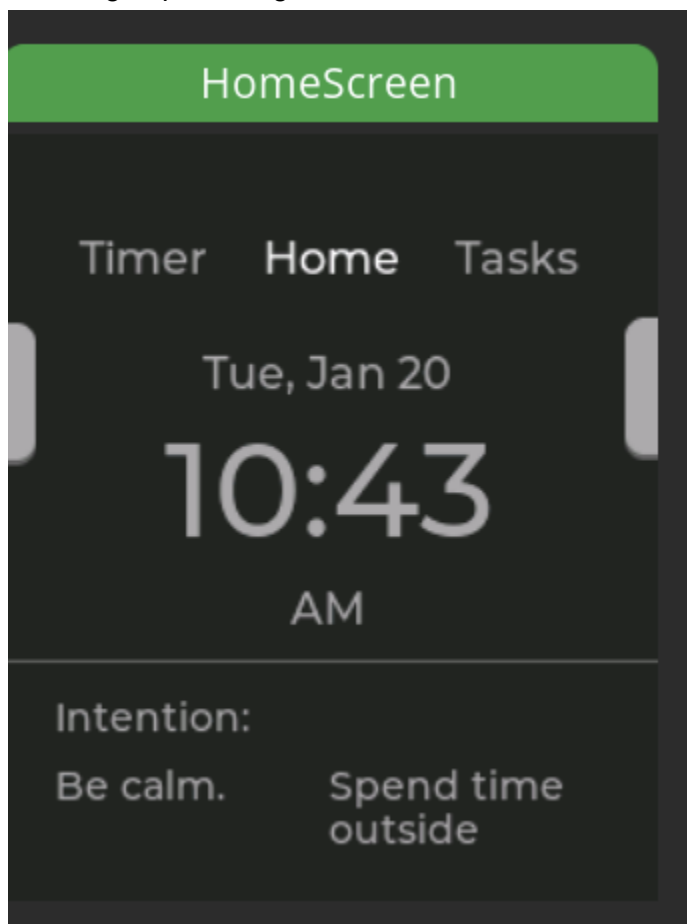

AM

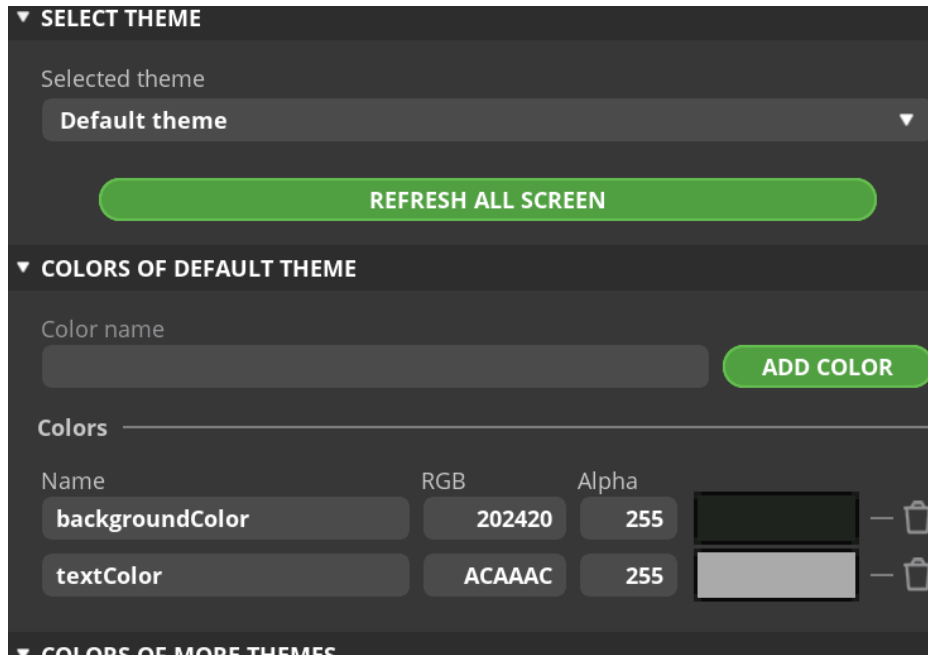

Today's Intention:

Intention:
Be calm.

Debating to put background color for current task or leave it be

Figured out how to include color themes, which will make adding color palettes much easier

1. What did you accomplish, please reflect on your time management. What worked or didn't?

I cleaned up the watch interface, mainly the homepage by making the main clock font bigger, and adding cohesiveness to all of the font sizes. However, exporting this file onto the watch failed, so will have to meet with tech side to discuss problems.

2. How did you integrate feedback?

I integrated feedback by adjusting the spacing between texts and learning more about how Squareline organizes its objects.

3. What was unexpected / what lessons did you learn?

I learned that when exporting SquareLine files, I need to let teammates know about naming conventions I set up or any new objects I created in the file. Going forward, once the button configuration is set up, I will make the UI look more polished and professional, and including more fonts.

Week 7 Progress | 2/22 - 2/28

Rhys:

- HX Testing 2, usability tests with the physical watch w/ functional buttons
 - ☒ Build questions
 - Thursday 2-6
 - ☒ Schedule interviews
 - Friday 2-6
 - ☐ Conduct interviews
 - TBD

Reaching out to possible people to interview:

Building questions about watch functionality, features, aesthetics, userflow

What are people's overall opinions of this watch?

Description of Nudge Watch:

We aim to create a wearable that minimizes stress in people with ADHD, helps them become more organized in their daily habits, and become intentional in how they spend their time. The device aims to support users in managing focus, stress, and overall well-being. The watch operates independently from distracting phone notifications, such as texts and social media alerts, and instead provides only meaningful reminders and insights to the user. While wearing the watch, users can have organized checklists, a pomodoro timer to enhance focus, and a box-breathing function for breaks. The watch will act as an external memory tool for users to offload information about their schedule and to-dos to reduce their cognitive load. The goal is to help users focus on one task at a time rather than a bunch of tasks at once. Users will also be able to receive reminders about their schedule and set personalized time goals. The watch will allow users to reflect on their own data, including their time goals and stress levels as a way to build self-awareness and healthier routines.

List of questions:

<https://docs.google.com/spreadsheets/d/1XGiCqnNhLRPd3H60NVO5fLN08cUVg6zXfl9w3O0liA/edit?usp=sharing>

Blurting out possible questions, no specific order:

- Is there anything confusing?
- What do you think about the home screen?
- How do you feel about the size of the text?
- How do you feel about the navigation?
- This watch comes with a charging dock that allows users to transfer tasks from the doc into the watch.
 - What visual elements would you expect to see when transferring watch data?
 - Ex: loading bar, completion notification, different color scheme
- How do you feel about the color scheme
- How do you feel about the text fonts and their font sizes?

BEGINNING OF QUESTIONS:

- What are your initial thoughts on...
 - the homescreen
 - What do you think about the home screen?
 - How do you feel about the text fonts and their font sizes?
 - How do you feel about the navigation / layout?
 - task screen
 - What do you think about the home screen?
 - How do you feel about the text fonts and their font sizes?
 - How do you feel about the navigation / layout?
 - This watch comes with a charging dock that allows users to transfer tasks from the dock into the watch.
 - What visual elements would you expect to see when transferring watch data? (Ex: loading bar, completion notification, different color scheme)
 - How do you feel when checking off a task?
 - Pomodoro timer
 - How do you feel about the text fonts and their font sizes?
 - How do you feel about the navigation / layout?
 - breathing exercise
 - How do you feel about the text fonts and their font sizes?
 - How do you feel about the navigation / layout?
- How do you feel about the color scheme
- How do you feel when pressing the buttons to navigate?
- How do you feel about the height of the buttons?
 - Would you want the buttons higher if it meant the buttons were thicker?
 - How do you feel about the overall size of the button
- Have people imagine what they see for the aesthetic.

- Treat it like a real product
 - Have case variants at expos
- Rank the comfort of your watch wrist band on a scale of 1-5. 1 being uncomfortable, 5 being comfortable
- Is there anything you feel is missing from this watch? If so, what is it?
- What time of the day would you want to be reminded of this task?
- Enclosure feedback
- What would make this experience better for you?
- If you were to buy this product, how would you expect this to look and feel?
- What would you imagine the enclosure of this product to look like?

Scheduled 4 interviews next week, will schedule 1-2 more.

Retrieving watch UI from Liz to upload on my end so I can interview with the functioning prototype, checking in with other team members to see the status of the physical enclosure.

1. What did you accomplish, please reflect on your time management. What worked or didn't?

Scheduled interviews, what worked was reaching out to people I knew who had ADHD and would be flexible with their scheduling. Worked with Liz to integrate Squareline events into the ESP32.

2. How did you integrate feedback?

Will implement feedback once interviews have been conducted.

3. What was unexpected / what lessons did you learn?

I learned I have to focus on reaching out to my teammates if they need assistance with work and to prepare questions on the go during the interviews.

Week 8 Progress | 3/1 - 3/7

1. What were your goals for this week? PASTE them into your blog post.

- Finish scheduling HX tests
- Conduct HX interviews
- Share feedback with team members + integrate into watch

2. What did you accomplish, please reflect on your time management. What worked or didn't?

I was able to interview 4 people to look at our watch design, layout, and aesthetic to gather the initial thoughts on it. The questions I prepared prior answered our questions about the look and feel, and will give us a foundation to fix any glaring issues. I then shared this information with our group and will review it this week.

3. How did you integrate feedback?

We will integrate feedback by applying what the users have said regarding our aesthetic and adjusting font sizes, color schemes, layouts, and other minor tweaks. Once we have the physical buttons working on the watch, we plan to gather a little more feedback on how they feel and if they match with the current navigation, but user testing confirms this works. One thing I plan to check when the buttons function on the enclosure is to see how the navigation feels on the task selection screen.

4. What was unexpected / what lessons did you learn?

I learned that some people don't mind having the current watch band, and that an important design feature would be to give the user a choice to put their own band on it. Another thing I noticed was that a lot of people enjoyed checking off a task and liked the green. We need to synchronize the checkmark in the task box with the green indicator.

HX Testing Round 2 - Part 2

Feedback:  HX Testing Feedback

- Summary in column H

Summary of feedback

- Branding and colors need complete rebranding
 - Lighter colors
 - green/red is good
 - The green color on the task screen feels backwards
 - Green = go/start
- Text size can be improved, make bigger for readability
- Some spacing is off
- Navigation make sense to users and is easy to learn
 - “Has a very small learning curve, that any watch would have”
- Some elements feel like they are touch screen
- Watch band could be improved
- Reconsider overall aesthetic to match our target audience

Lessons learned

- Based on the feedback, what did you learn?

I learned that we need to completely figure out our color scheme, branding, and font size. We learned that we have a lot of work to do on our UI.

- What worked, what didn't work?

Our layout, overall simplicity, and navigation of our watch worked with our vision, but we need to adjust our color scheme and aesthetic to match our brand.

- *How will you incorporate the feedback into your next steps with your Capstone?*

We are planning on using the feedback we got from the users to update the UI on the watch. We focused on the functionality of the watch to begin with, so now we have time to specifically look at the UI and change it. Using squareline it is easy to iterate quickly and make design decisions. We plan to directly update the issues with the color scheme and background color. We also want to add some more interactive elements.

Week 9 Progress | 3/5 - 3/12

1. What were your goals for this week? PASTE them into your blog post.

- Make updates to UI from HX testing 2 with Liz
- Help with prep for presentation
- START UI for docking station
- 400px x 800px resolution of dock
- Changes to make to UI of watch:
 - ☒ ~~Fix the spacing of button indicators, make it consistent with every page~~
 - ☒ ~~Fix the padding of the bottom task~~
 - ☒ ~~Fix the padding of the start / stop buttons~~
 - ☒ ~~Fix the brightness of the text color or text size~~
 - ☒ ~~Find other color themes~~
 - ☒ ~~Does each page make it clear that there are NOT touchscreen elements?~~
 - ☒ ~~Does it look less like a slide show?~~
 - ☒ ~~Does the overall appearance match our theme/vision (less like an Apple product)?~~
 - ☒ ~~Add semi colons to intention and current task~~
 - ☒ ~~Make menu on the same level~~

Successfully imported custom fonts into SquareLine

Testing out different variations then presenting them to team

We have decided on this pixelated font. Still questioning what background would fit our theme, but received positive feedback from the dark background.

Met up with the team to work on the presentation in person.

Liz and I are also adjusting the timer animation to look smooth and include an icon.

2. What did you accomplish? Please reflect on your time management. What worked or didn't?

I was able to successfully upload fonts into the Squareline File. From here, Liz and I went through different design variations to see what colors worked and which did not.

We felt the pixelated font with the black background created a welcoming environment with easy-to-read text.

3. How did you integrate feedback?

From our previous user tests, one of the main concerns regarding our design was that we had an inconsistent theme and colors that did not align with our brand. We used this feedback to customize a layout that was more in line with our vision.

4. What was unexpected / what lessons did you learn?

I learned that a lot of people have different preferences for what interface they like and what is satisfying. For some people, our interface will not align with their vision, but knowing this is okay because we are not trying to satisfy everyone in the world, just our audience.

Week 10 Progress | 3/22 - 3/28

1. What were your goals for this week? PASTE them into your blog post.

Rhys

- Get user feedback from watch screen WITH docking station
- Update watch/docking station aesthetic to make more cohesive
 - Adding icons to clear space
- Branding guide for dock, organize into a sheet for:
 - Color palettes
 - Fonts
 - Spacing
 - Icons

2. What did you accomplish, please reflect on your time management. What worked or didn't?

I was able to integrate the new fonts and clean up the design on the watch and dock. Spent a lot of time fixing a small error, which I should have took a break from doing and came back for rather than focusing so much time on that.

3. How did you integrate feedback?

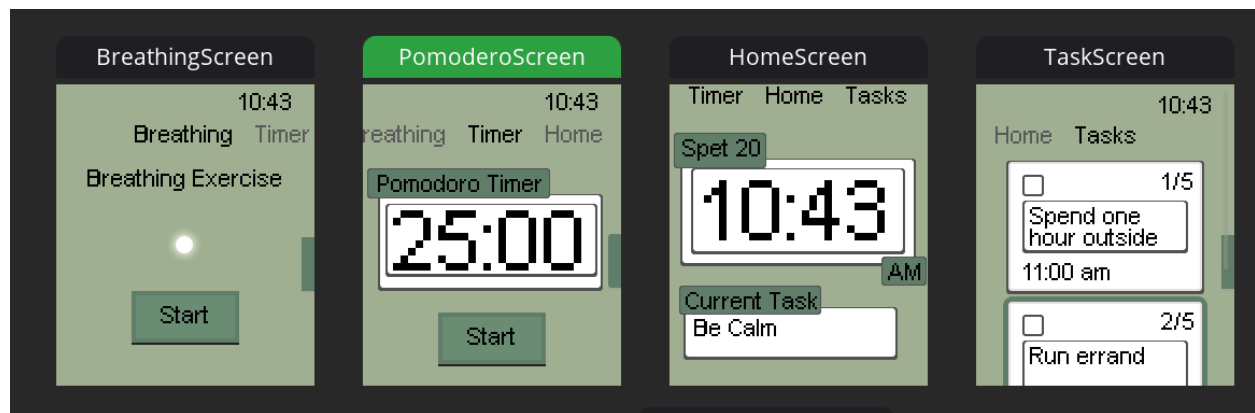

We integrated the feedback we received from the watch during the presentation by making the design look more retro and old-school, rather than focusing on modern-day interfaces.

4. What was unexpected / what lessons did you learn?

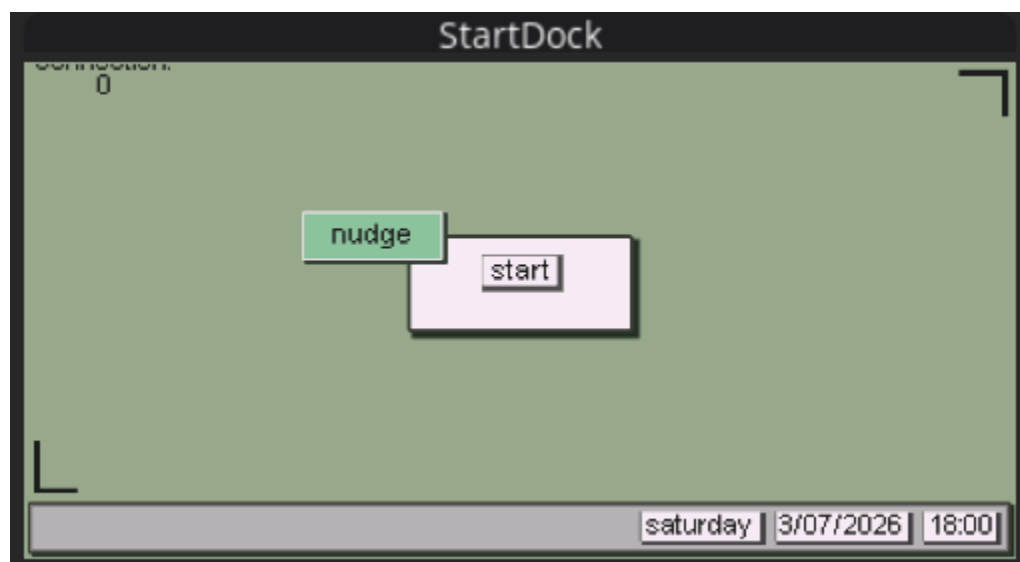

I learned that I need to focus on the functionality now that the aesthetic is more locked down. I plan on integrating that this weekend.

Liz and I updated the UI of the watch to match the overall aesthetic of our brand.

After:

Changed the font type on each interface on the dock to match the font on the watch:

IntentionDock

connection: U

intention

today i want to be ..

productive

saturday 3/07/2026 18:00

Task Dock Instruc

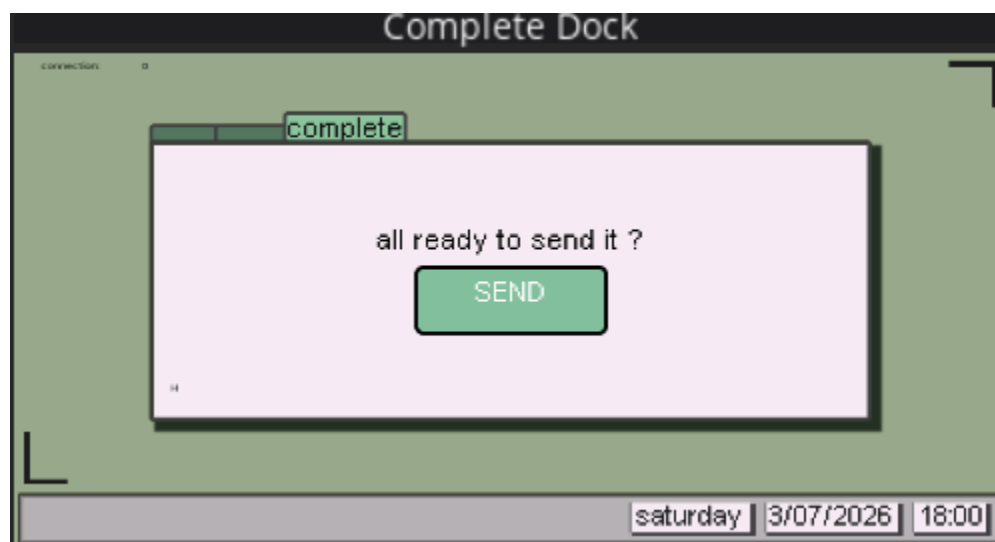

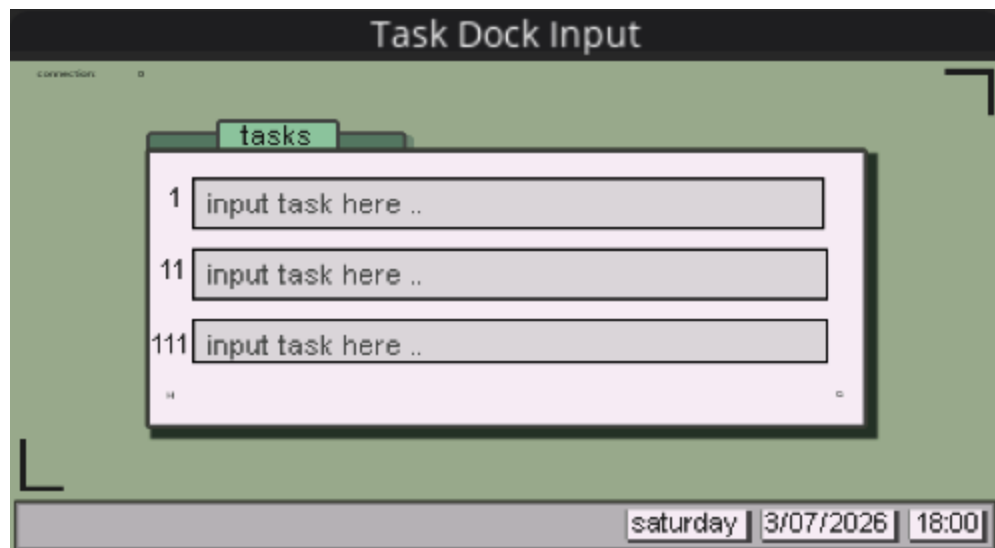

connection: a

tasks

think about 3-5 tasks you want to complete ..

(think carefully because once uploaded you can't change them for 24 hours)

saturday 3/07/2026 18:00

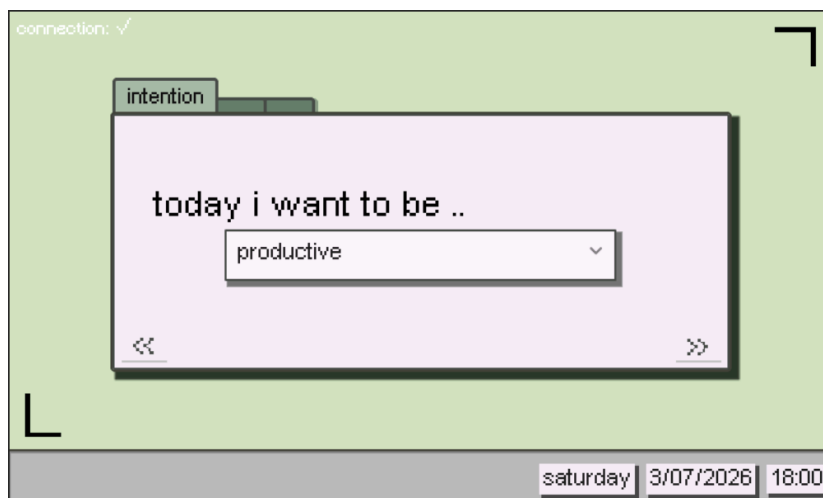

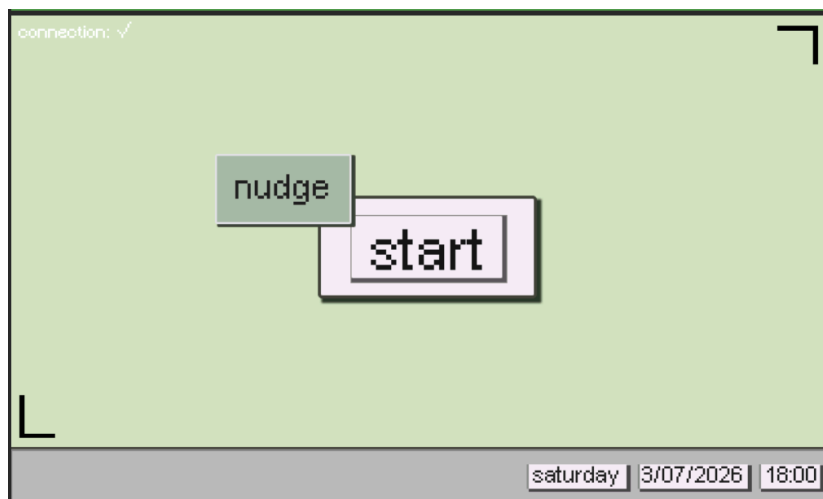

Changed the fonts, cleaned up the design

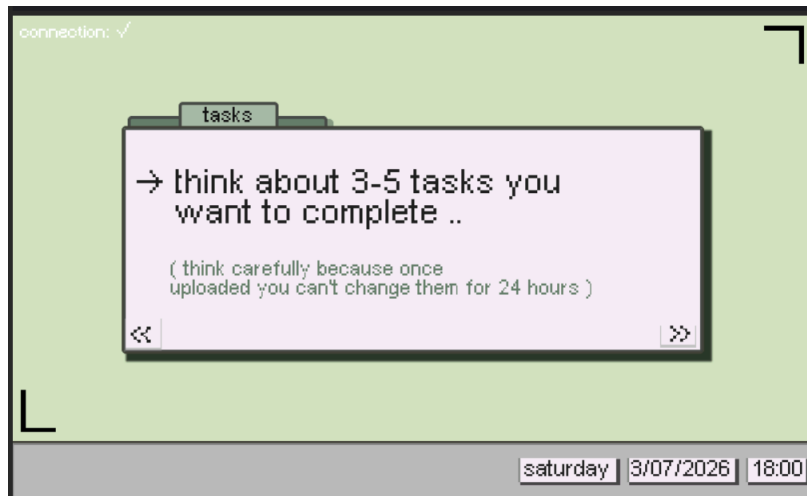

Week 11 Progress | 3/29 - 4/4

GOALS:

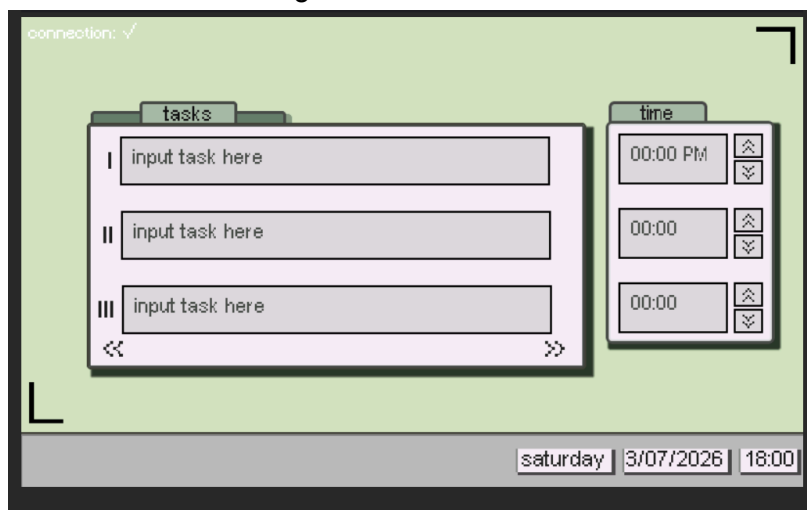

- Fix overall spacing on watch
- Finalize the UI
- Adding a time anchor for tasks to dock
- Logo

Adjusted color scheme for background

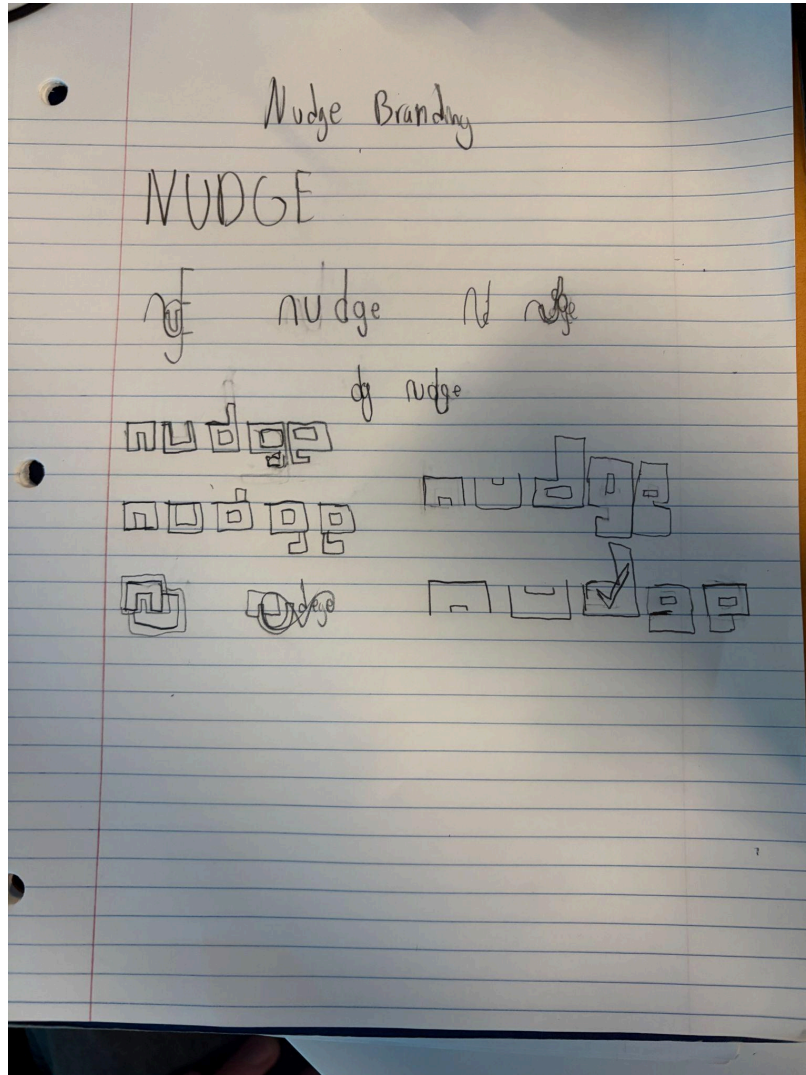

Added UI for increasing the time anchor associated with each task

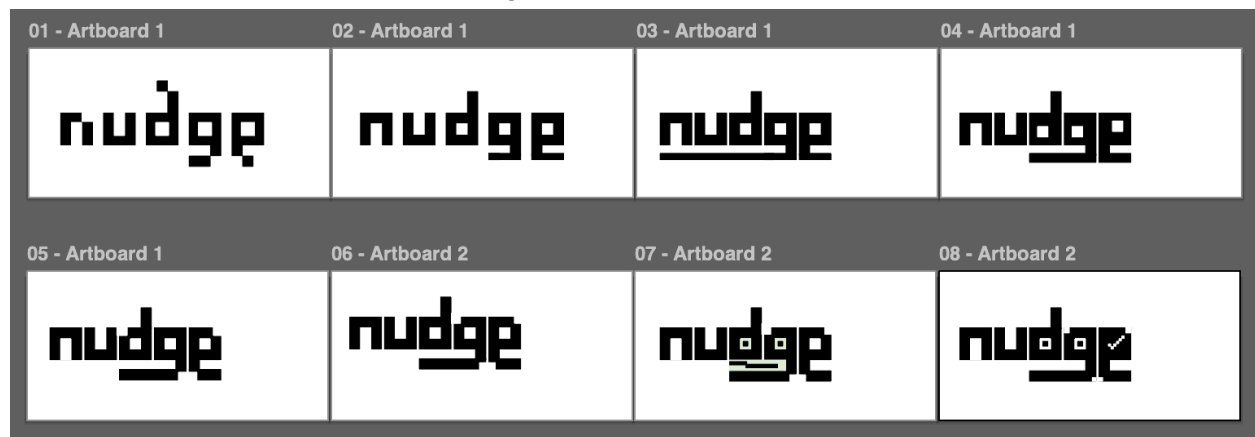

Potential logos / branding ideas

Wanted to go for a pixelated logo idea

Drafted out ideas on paper

Went into Adobe Illustrator to create logo examples

Will see which ones my team members like, I personally like #8

2. I managed to complete all of the goals I created this week. I was able to give myself realistic mini deadlines and accomplish each goal within that time frame. I also communicated with team members for any updates.

3. I integrated the positive feedback we received regarding the keychain interface into the dock. A lot of people liked the simplicity of the pixelated style, so I wanted the logo to be pixelated as well. On logo 8, I also utilized our checklist feature as a design element in the logo.

4. I learned that from using Illustrator in other classes, I was able to remember its functions to create this logo and activate the grid layout to make sure the spacing and proportions were cohesive. I also learned that I appreciate logos with simplicity, but a unique element incorporated that helps it stand out from being too bland.
