Audit Objective and Business Context

AUDIT OBJECTIVE

This audit aims to identify usability improvements to make it easier for nonprofit organizations to request technology.

GOAL

Provide affordable or donated technology to other nonprofits

AUDIENCE

Nonprofit organizations seeking technology access

PURPOSE

Allow easy, low-friction access to technology

Scope

Homepage

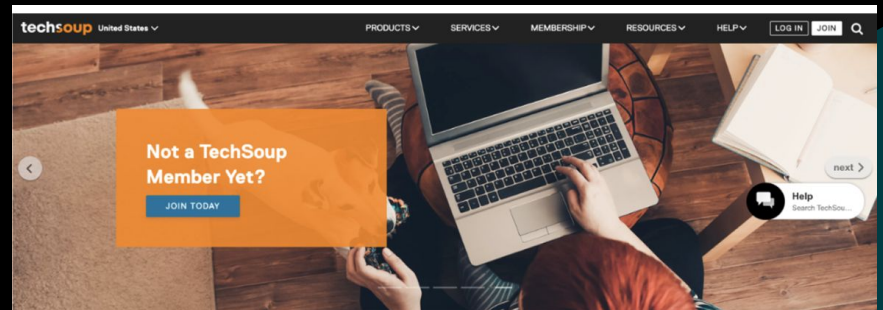

Membership & Validation

Navigation

Accessibility

Services / Products

Information Architecture

Persona-Driven Insights

John Nathanson

ABOUT

John is a college graduate who is beginning to work in a nonprofit organization. He is looking for tech services that are in budget for his organization.

GOALS

- Easily access technology
- Find discounts

NEEDS

- Simplification
- Direct navigation from the homepage

SKILLS

Tech knowledge	
Nonprofit familiarity	
Document organization	
Communication	

PAIN POINTS

- Loading time
- Lacks guidance

AGE 24

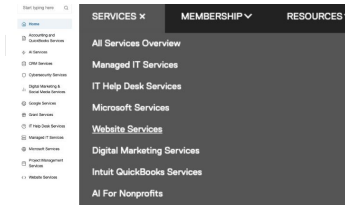

JOB TITLE Librarian

LOCATION Boulder, CO

Visual Design Evaluation

Visual design evaluation examines the hierarchy and branding across the site.

Visual inconsistency between page types

Service pages use a light-mode nav bar; homepage uses dark mode. Breaks visual consistency and feels less polished.

RECOMMENDATION

Keep one nav mode across all pages, or give the user a light/dark toggle.

CTA buttons lack visual emphases

EVIDENCE

Orange CTA buttons blend into surrounding elements.

RECOMMENDATION

Darken the orange or switch to a higher-contrast color so CTAs stand out clearly.

Content Evaluation

A content evaluation examines the words and labels on the site

Service summaries are too long

EVIDENCE

Content summaries on certain services are too bulky, adding a lot of unnecessary scrolling for the user.

RECOMMENDATION

Summarize each service more concisely, especially when the tab shrinks horizontally.

Assumes nonprofit seeking technology

EVIDENCE

The homepage's main CTAs assume visitors are there for nonprofit organizations

Is Your Nonprofit a TechSoup Member Yet?

Join the world's leading technology resource for nonprofits by a nonprofit.

RECOMMENDATION

Tell users directly that this site is for nonprofit organizations

Heuristic Evaluation

A heuristic evaluation is a review method using an established set of usability principles called heuristics to find design problems.

Membership validation page gives users friction

EVIDENCE

Requires member verification too early

RECOMMENDATION

Move the verification step to after the user has decided they want to proceed.

No known shortcuts for experienced users

EVIDENCE

Navigation relies on filters

RECOMMENDATION

Add a shortcut or last visited section for returning users who already know what they want

Inconsistent CTA labeling

EVIDENCE

The navigation bar uses 'JOIN' while the homepage body uses 'JOIN TECHSOUP' for the same action.

RECOMMENDATION

Choose either 'JOIN' or 'JOIN TECHSOUP'.

Accessibility Evaluation

An accessibility evaluation tests whether the site can be used by people with visual, motor, or cognitive disabilities, measured against WCAG standards.

Low color contrast on CTA buttons

EVIDENCE

Light orange buttons with white text fail WCAG

RECOMMENDATION

Increase contrast or change color

Missing 'Skip to Content'

EVIDENCE

No skip link or feature available on any page

RECOMMENDATION

Add a 'Skip to Content' link

Keyboard navigation barrier - All Services

EVIDENCE

The 'Learn More' link on the All Services page cannot be activated without a mouse.

RECOMMENDATION

Ensure the link can be accessed through tabbing to it.

Keyboard navigation barrier - carousel

EVIDENCE

Top of the homepage cannot be accessed without a mouse.

RECOMMENDATION

Add keyboard support to navigate

User Journey Evaluation

A user journey evaluation examines the path a user takes to identify where they get confused on a task.

Overwhelming service selection screen

EVIDENCE

The user choosing what service to use in the beginning gets overwhelming and causes friction from not knowing what to choose.

RECOMMENDATION

Quick onboarding process to get a more specific output

Lack of positive feedback in input fields

EVIDENCE

Noes positive feedback that indicates if something is filled out or completed when signing up in field submission.

RECOMMENDATION

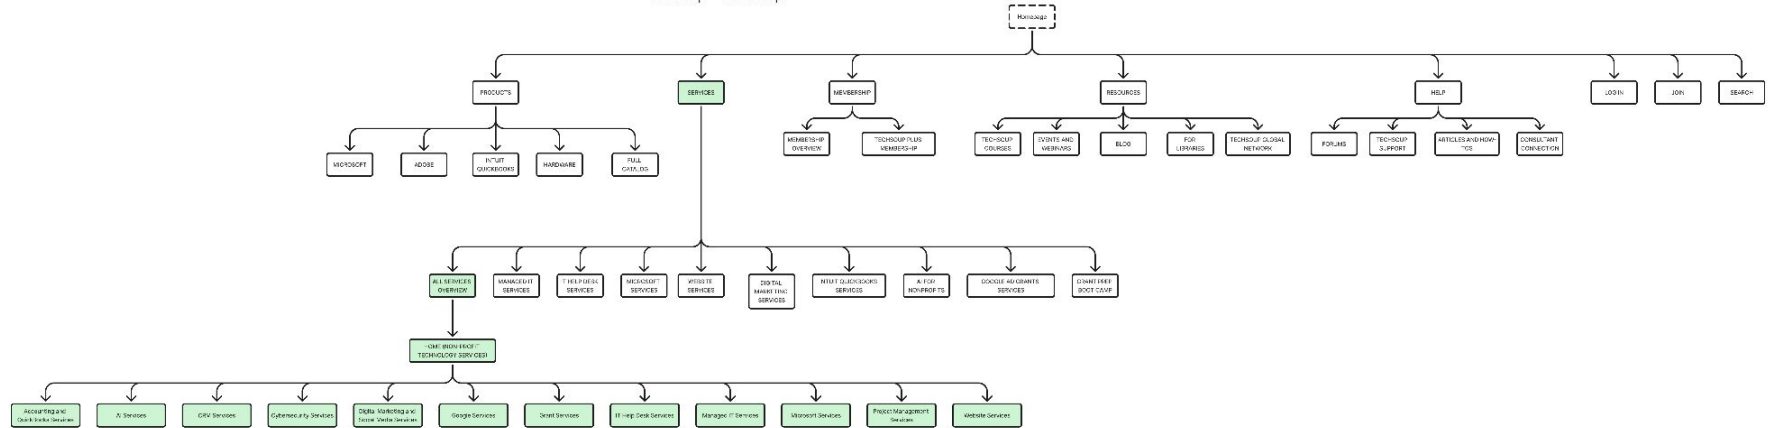

Adding a green outline with a checkmark around the input field

Information Architecture Evaluation

Legend

Sitemap - Techsoup

Reflection

- TechSoup has a clear mission
- Accessibility issues should be treated as a major priority
- The biggest friction points happen early in the experience

Next Steps

- Fixing accessibility problems to meet WCAG standards
 - Membership validation moved later in the journey
 - Further testing of first-time nonprofit users completing a request to a service
- 
- A decorative orange line graphic in the bottom right corner of the slide. It consists of several horizontal and vertical segments of varying lengths, connected by rounded corners, creating a stepped or staircase-like effect.
